

FOOTWEAR MANUFACTURER

LONG FEI SHOES CO.,LTD

For more details, please contact with us by following emails:

Kevin@safetyshoe.cn www.longfeixieye.com

Whatsapp/Wechat/Phone:+8618678086805

Factory address:Phoenix AV.And West Area Circled The Intersection North A Kilometer,Gaomi City
Shangdong Province China

FOOTWEAR MANUFACTURER

WELCOME

LONGFEI SHOES

This is Long Fei Shoes Co.,Ltd. In the footwear industry, we have 30 years of experience and technology, Have the most advanced DESMA machine , Fully automatic cemented production lines,Goodyear production lines,We are professional manufacturer of safety shoes/ work shoes / outdoor shoes and Whole footwear.Production capacity of more than 5 million pairs of shoes per year.

We have the CE certificate ,BSCI ,SAI GLOBAL (Austrian certification) ,CSA (Canadian certification), America ASTM ,South America, South Africa & ISO 9001 & 14001 & GRS.And we also have the SATRA Laboratory, ensure the quality of each order.We always focus on customer service and solutions, and will always help customers win more market share!There is the promotional video of our factory on our official website, welcome to check it out.

www.longfeixieye.com.

TO THE LONGFEI WORLD

ENVIRONMENT SAVING INITIATIVE

“Saving our planet, lifting people out of poverty, advancing economic growth... these are one and the same fight. We must connect the dots between climate change, water scarcity, energy shortages, global health, food security and women’s empowerment. Solutions to one problem must be solutions for all”

“Saving our planet, lifting people out of poverty, advancing economic growth... these are one and the same fight. We must connect the dots between climate change, water scarcity, energy shortages, global health, food security and women’s empowerment. Solutions to one problem must be solutions for all”

Taking the path of sustainable development

THE SHOE SECTION

 When workers could step on sharp objects or be struck by sharp objects from above, shoes with steel midsole or Kevlar and thick materials surrounding the foot offer the best protection. At construction worksites, for example, many sharp objects could be in someone's path. A soft-soled shoe might not provide enough protection.

 The steel toe in the toe which protects the foot from falling objects or compression. When workers carry heavy materials or work in dynamic environments where many people, machines and vehicles are operating at once, falling and flying objects are common hazards. Protective shoes like steel toe boots can effectively prevent crushing

 The sole material makes the safety shoes extremely shock absorbing and comfortable to wear. Every time you take a step, the sole absorbs the shock that would otherwise propagate in the legs and back. It gives a walking comfort beyond the usual – even on hard surfaces and after many hours on one's feet.

 With this performance, these shoes have the ability to dissipate on the ground the electrostatic tension accumulated in the body, thus avoiding electric shocks and sparks. In working environments where there is risk of explosions, the need to have such dissipation becomes vital, therefore conductive shoes are used instead of those simply anti static.

 Oil resistant safety boots refer to safety footwear that are entirely designed not to be damaged by oil. They can perform their intended function when exposed to oil due to oil-resistant elastomers to absorb oil, especially at elevated temperatures.

 According to the OSHA and ASTM standards, heat-resistant safety shoes are shoes that can withstand the heat of about 300°C for about 60 seconds. It should also be able to protect you from heat emitted by different sources.

 To reduce the chances of an electrical accident, non-conductive footwear made from leather, rubber or other materials that don't conduct electricity can be worn. In locations where the build-up of static on the body poses a hazard, anti-static or conductive footwear can be used. These options reduce the amount of static that accumulates on the body, preventing static electric sparks.

 Lightweight safety boots maximize on their ergonomic construction. That is, they shift excessive pressure off your feet as you stand or move around for hours. Hence, you won't sprain your back, knees, or ankles.

ESD FOOTWEAR

As we walk, the contact and separation between the soles of our shoes and the floor generates a static charge. The charge stays in place, on our body, until we touch something or someone. In a rush of current, like a tiny lightning bolt, the static discharges to that person or object. This discharge—or static event—can damage or destroy sensitive electronics or electronic circuitry.

Footwear is the meeting point between the floor and a person walking on the floor. When a person walks on the floor, the conductive elements in ESD footwear form an electrical bond or bridge between his or her body and the carbon veins or particles in the ESD floor, drawing static away from the body and dissipating charges to ground.

No ESD flooring material can reduce charges to the minute voltage necessary to protect sensitive—and ultra-sensitive—electronics. For this reason, every electronics manufacturing and handling facility should mandate and enforce the use of ESD-protective footwear. When evaluating ESD flooring materials, it is absolutely imperative to account for the charge-generation potentials of the flooring in conjunction with the footwear to be worn in the space, and to choose the most compatible options.

SAFETY STANDARDS

Classification	Test to achieve classification	Safety Standards				
		S1	S2	S3	SBP	S1P
SB	Toe protection tested with 200J impact and 15kN compression force	●	●	●	●	●
P	Penetration resistant outsole tested at 1100 newtons			●	●	●
A	Electrical resistance between foot and ground of between 0.1 and 1000 mega ohms	●	●	●		●
E	Energy absorption of the seat region tested at 20 joules	●	●	●		●
WRU	Water resistant upper leather		●	●		
The below are further tests that can be added to the above classifications (e.g. S3 HRO)						
HRO	Heat resistant outsole compound tested at 300°C					
CI	Insulation against the cold - temperature drops less than 10°C when tested at -17°C					
M	Metatarsal protection - tested to 100J impact					
The below are further tests that can be added to the above classifications (e.g. S3 HRO SRC)						
SR	Slip resistant on ceramic tile floor with sodium lauryl sulphate solution

Upper: Microfibro and Tpu
Lining: Mesh
Sole: PU

LF-T-008

size:6-14
Protect Toe Cap: Steel or Composite toe
Protect Insert:Steel plate or Kevlar
Upper: Microfibro and Tpu
Lining: Mesh
Sole: PU

WITH BEST PRODUCE CONSTRUCTION

THE MOST SUITABLE FOR YOU

LONGFEI SHOES

Complete set of fully automatic cutting system

Fully automatic sewing line

International standards and certified laboratories: SATRA Laboratories

Fully automatic PU injection molding assembly line

DESMA supplies efficient and economical production systems of highest quality, reliably and fast, to footwear manufacturers worldwide. All our efforts are based on the benefit to be gained from our products for the economical success of the customer. Customer satisfaction is the driving force behind our thinking and dealing. Our aim is a longterm, trusting relationship with our customers. The trust of our customers is an obligation for us!

INJECTION MACHINE

MANIPULATOR

We believe in a policy of uncompromising quality in the fields of design, manufacturing, distribution, service and maintenance. Continuous research and development is the origin for our progressive market penetration and for technological leadership. Reliability and efficiency characterize our products due to the ongoing optimization of ease of operation, industrial safety and environmental compatibility.
